The HK Series

Self-Service Check-In Solution

The HK Kiosk offers a seamless solution for autonomous check-in for hotels, healthcare clinics, and more.

A low-profile design offers flexibility in placement and a look that easily integrates into your business's design aesthetic. Freestanding and countertop options are available.

The HK's standard integrated camera, card dispenser, thermal receipt printer, and LED status indicator combined with optional components such as passport reader, and customizable EMV payment device bracket offer flexibility for a range of applications.

The HK kiosk can be paired with many software platforms including property management systems and electronic health record systems, or kiosk deployers can opt to utilize KIOSK's in-house software team for custom a self-service solution.

Additional applications from Kiosk Integration Exchange partners add capabilities such as facial recognition, video conferencing, and passive digital advertising.

With ready-to-order availability, the HK kiosk is a scalable self-service solution suitable for deployments of just a few kiosks to large-scale global fleets.
